

Cal OES Daily Situation Report

November 15, 2016

Coit Tower, also known as the Lillian Coit Memorial Tower, is a 210 foot tower in the Telegraph Hill neighborhood of San Francisco. The tower, in the city's Pioneer Park, was built in 1933 using Lillie Hitchcock Coit's bequest to beautify the city of San Francisco; at her death in 1929 Coit left one-third of her estate to the city for civic beautification.

Active Weather Warnings, Watches and Advisories by County:

http://www.wrh.noaa.gov/sto/brief/wwa_bc_cal.php

WEATHER SYNOPSIS BY REGION

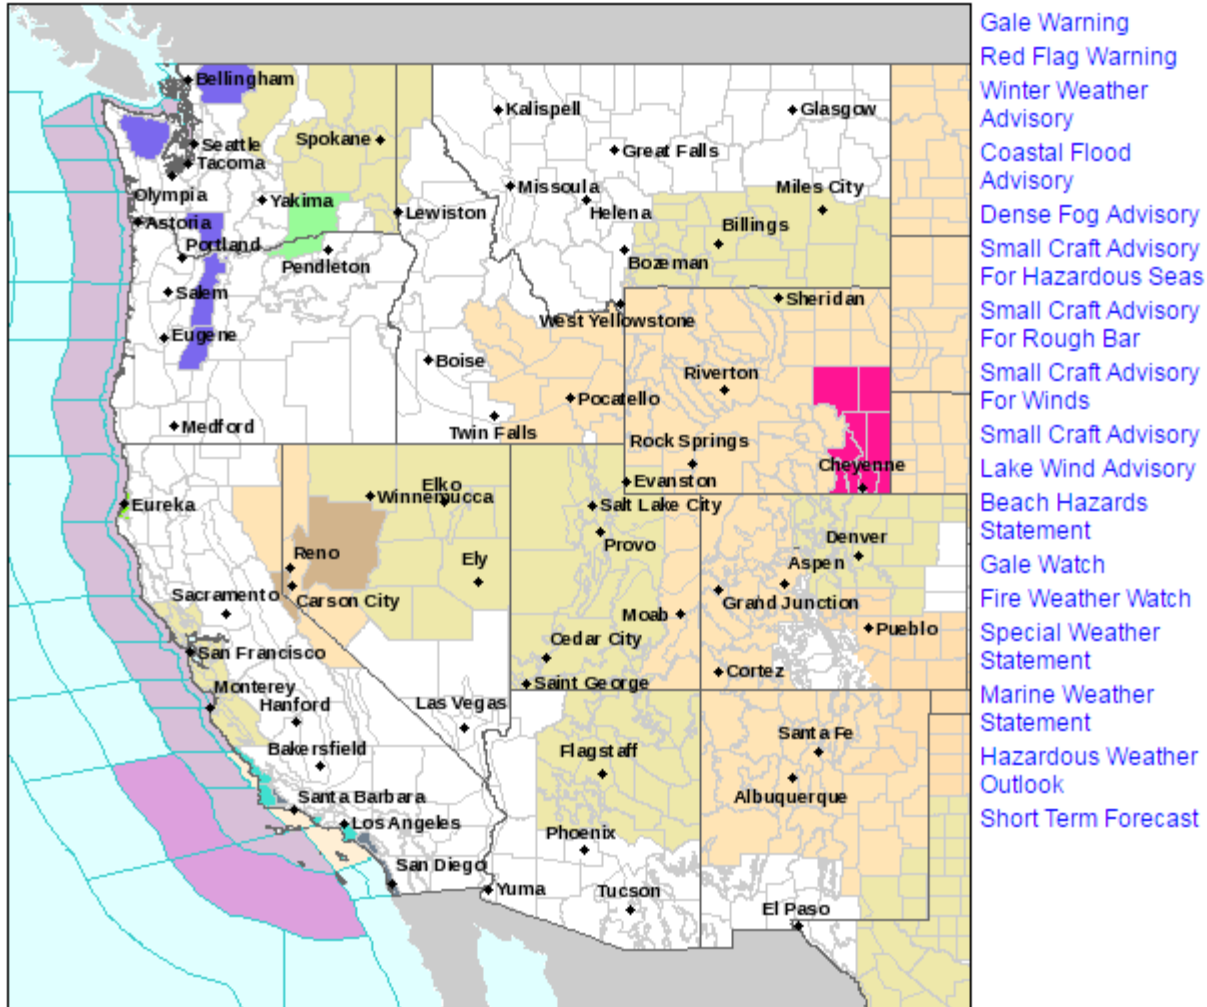

NORTHERN CALIFORNIA

We will be seeing an unsettled, cooler weather pattern over the region for the next 7 days. In general, moist, cool conditions will prevail, and in areas that see some mostly clear periods overnight, valley fog can be expected to form. One reasonably wet weather system will be moving across the region today with at least light precipitation for most areas. Showers will be lingering Wednesday, especially over the northern and eastern mountains. Snow levels will be lowering gradually into Wednesday to reach around 3000-4000 feet in the north and 6000-6500 feet in the south. Snow accumulations of 2-6 inches are expected at these lower elevations with more in the high country. Moderate to strong gusty southerly winds of 10-25 mph with gusts mostly 35-50 mph will accompany the current weather system into Wednesday morning, mainly in the northern and eastern mountains. Stronger gusts more in the 70 mph range can be expected in the higher elevations of the Northern Sierra. Thursday into Friday will be drier for most areas as high pressure off shore moves east and ashore. There will still be some cloudiness these days, however, and high humidity. Later Friday a stronger, wetter system moves ashore then inland over the weekend with snow levels similar to Wednesday's or a little higher. Cloudiness and showers will linger Monday.

SOUTHERN CALIFORNIA

Temperatures will cool around 10 degrees across the coastal areas and around 5 degrees in the valleys today as offshore flow becomes onshore. There will be little change in temperature across the mountains and deserts as the strong ridge of high pressure over California moves east into the Desert Southwest. Maximum temperatures will be in the mid 60s to mid 70s across the mountains and mid 70s to upper 80s in the valleys. Minimum humidity will remain mainly in the single digits and teens away from the coastal areas and Central Valley today. A Pacific trough will cool temperatures to near or a little below normal and bring a significant increase in humidity away from the deserts Wednesday and Thursday. This trough will also bring scattered showers mainly to the Sierra tonight through Wednesday evening, with less than a quarter inch of rainfall. The snow level will be around 6,000 feet. Southwest to northwest winds of 20 to 40 mph with gusts to 60 mph will surface across the mountain ridges and desert passes including the Owens Valley tonight through Wednesday evening. The back side of the trough will bring northwest to north winds of 20 to 40 mph with gusts to 60 mph to the South Coast of Santa Barbara, the Grapevine, and the Colorado River Wednesday evening through Thursday morning. Temperatures will warm to 5 to 10 degrees above normal and humidity will drop back into the single digits and teens Friday and Saturday as a ridge of high pressure builds into the region from the southwest. Winds will be light Friday and Saturday. Another Pacific trough will bring cooling and possible showers to the entire region Sunday or Monday.
